

2016 Preventive Medications

Expanded List

Coverage Beyond Your Deductible

Preventive Medication List products aren't subject to a deductible. You'll pay a copay or nothing at all, depending on your plan. So you'll save money and get the medications you need to help you live well. What could be easier?

To check the cost of a medication, refer to your benefit handbook or contact customer service at the toll-free member phone number on your benefit plan ID card.

Quality Driven and Cost-Conscious Medications

As the pharmacy benefit manager for your benefit plan, Magellan Rx Management strives to offer you access to a broad choice of medications at a reasonable price.

The Preventive Medication List is a subset of products included within your plan's preferred, or formulary, medication list, which tells you what medications your plan covers.

Please note that most formulary medications are subject to a deductible. Preventive Medication List products are an exception. For a complete copy of your formulary listing, call customer service.

Proactive Therapy

Preventive medications help protect against or manage a medical condition. They may provide prenatal care, prevent osteoporosis or reduce risk of blood clots, stroke and heart disease.

Taking preventive medications as directed by your doctor can help avoid serious health problems. That may mean fewer doctor visits and hospitalizations, reducing your total health care costs.

Money Saving Generics

To get the most from your benefits, ask your doctor if there's a generic medication that's right for you. Generics normally cost less than brand medications, and the Food and Drug Administration (FDA) requires them to be just as safe and effective.

For More Information

If you have questions or would like additional information on the Preventive Medication List, please contact customer service at the toll-free member phone number on your ID card.

A list of covered preventive medications begins on the next page. Medications are listed both alphabetically and by therapeutic category. They are indicated by:

Generics: Lower case italic. For example, *acarbose*

Brands are capitalized and not italics. For example, Abilify

Oral and self-injectable Specialty medications are denoted by "SP" superscript and may be subject to limitations based on plan benefit design.
